Here is the distribution of scores on Test 1. The overall average was 61, and the averages in individual sections ranged from 56 to 65. There was one score of 100.

While I would be happier with a higher overall average, I am less disappointed with the average than with the scarcity of scores near the top of the scale. Only 6% of you achieved 90 or higher. The average on the sample test I posted and many of you used for part of your studying was only slightly higher than your class's average, but 18% of the students who took that test scored 90 or higher.

You know attendance at lectures is poor, and I was surprised by the number of students who took Test 1 but had not been taking quizzes and turning in homework. I know attendance is important, and we all know quizzes and homeworks count. Come to class, do your homework, and if you have questions, by all means see me in my office. I am eager to help.
