Contents

1	The Fourier Transform on $L^1(\mathbb{R})$	1
1.1	Definition and Basic Properties	1
1.1.1	The Fourier Transform on $L^1(\mathbb{R})$	2
1.1.2	Motivation	5
1.2	Translation, Modulation, Dilation, and Involution	11
1.2.1	The Riemann–Lebesgue Lemma	13
1.3	Convolution	14
1.3.1	Some Notational Conventions	14
1.3.2	Definition and Basic Properties of Convolution	15
1.3.3	Young’s Inequality	17
1.3.4	Convolution as Filtering; Lack of an Identity	19
1.3.5	Convolution as Averaging; Introduction to Approximate Identities	20
1.3.6	Convolution as an Inner Product	22
1.3.7	Convolution and Smoothing	23
1.3.8	Convolution and Differentiation	26
1.3.9	Convolution and Banach Algebras	27
1.3.10	Convolution on General Domains	28
1.4	The Duality Between Smoothness and Decay	32
1.4.1	Decay in Time Implies Smoothness in Frequency	32
1.4.2	Smoothness in Time Implies Decay in Frequency	34
1.4.3	The Riemann–Lebesgue Lemma Revisited	36
1.5	Approximate Identities	38
1.5.1	Definition and Existence of Approximate Identities	38
1.5.2	Approximation in $L^p(\mathbb{R})$ by an Approximate Identity ..	41
1.5.3	Uniform Convergence	42
1.5.4	Pointwise Convergence	44
1.5.5	Dense Sets of Nice Functions	45
1.5.6	Urysohn’s Lemma	46
1.5.7	Gibbs’ Phenomenon	47
1.5.8	Translation-Invariant Subspaces of $L^1(\mathbb{R})$	48

1.6	The Inversion Formula	50
1.6.1	The Fejér Kernel	50
1.6.2	Proof of the Inversion Formula	52
1.6.3	Summability	55
1.6.4	Decay and Smoothness Revisited	57
1.7	The Range of the Fourier Transform	59
1.8	Some Special Kernels	61
1.9	The Schwartz Space	66
1.9.1	Definition and Basic Properties	67
1.9.2	Topology and Convergence in the Schwartz Space	67
1.9.3	Invariance of the Schwartz Space	68
1.10	The Abstract Fourier Transform	70
1.10.1	Examples of Locally Compact Abelian Groups	70
1.10.2	Characters and the Fourier Transform	72
1.10.3	The Fourier Transform on LCA Groups	75
1.11	Fourier Series	77
1.11.1	Fourier Series	77
1.11.2	Partial Sums and the Dirichlet and Fejér Kernels	78
1.11.3	Approximate Identities	81
1.11.4	Cesàro Summability and the Inversion Formula	83
1.11.5	Completeness and the L^2 -Theory	85
1.11.6	Minimality, Exactness, and Basis Properties	86
1.11.7	The Conjugate Function	90
1.11.8	Pointwise Almost Everywhere Convergence	95
1.12	The Poisson Summation Formula	97
1.13	The Fourier Transform in Higher Dimensions	98
1.14	Notes and References	100
2	The Fourier Transform on $L^2(\mathbb{R})$	101
2.1	Definition and Basic Properties of the Fourier Transform on $L^2(\mathbb{R})$	101
2.2	The Hermite Functions	108
2.2.1	Construction of the Hermite Functions	108
2.2.2	Wiener's Definition of the Fourier Transform on $L^2(\mathbb{R})$	111
2.3	The Fourier Transform on $L^p(\mathbb{R})$	112
2.4	The Classical Uncertainty Principle	116
2.4.1	Concentration and the Statement of the Classical Uncertainty Principle	116
2.4.2	Simultaneous Approximation and Smoothness versus Decay	120
2.4.3	Proof of the Classical Uncertainty Principle	122
2.4.4	Additive Form of the Uncertainty Principle	124
2.4.5	Operator-Theoretic Proof of the Uncertainty Principle	125
2.4.6	Hermite Function Proof of the Uncertainty Principle	126
2.4.7	A Local Uncertainty Principle	126

- 2.5 The Paley–Wiener Theorem 128
 - 2.5.1 Motivation 128
- 2.6 The Donoho–Stark Uncertainty Principle 131
 - 2.6.1 Concentration and Essential Support 132
 - 2.6.2 The Donoho–Stark Uncertainty Principle 134
 - 2.6.3 Size of the Supports 135
- 2.7 Energy Concentration 137
 - 2.7.1 Time-Frequency Limiting Operators 137
 - 2.7.2 Restatement of the Problem 139
 - 2.7.3 Time-Frequency Limiting Operators and the Spectral Theorem 140
 - 2.7.4 Double Orthogonality 141
 - 2.7.5 Prolate Spheroidal Wave Functions 142
 - 2.7.6 Behavior of the Eigenvalues 143
 - 2.7.7 The Space of Band- and Time-Limited Functions 145
 - 2.7.8 The Range of Time-Frequency Concentrations 147
- 2.8 Notes and References 151
- 3 Distributions 153**
 - 3.1 Motivation 154
 - 3.2 Distributions of Various Sorts 156
 - 3.2.1 The Connection between Topology and Convergence ... 156
 - 3.2.2 The Schwartz Class and the Space of Tempered Distributions 157
 - 3.2.3 $C^\infty(\mathbb{R})$ and the Space of Compactly Supported Distributions 160
 - 3.2.4 $C_c^\infty(\mathbb{R})$ and the Space of Distributions 162
 - 3.2.5 Inclusions 165
 - 3.2.6 Convergence of Distributions 166
 - 3.3 Functions as Distributions 168
 - 3.3.1 Locally Integrable Functions 169
 - 3.3.2 Functions with Polynomial Growth 171
 - 3.3.3 Compactly Supported Functions 173
 - 3.4 Operations on Distributions 174
 - 3.4.1 Translation, Modulation, Dilation, Conjugation, and Involution 174
 - 3.4.2 Products of Distributions with Smooth Functions 177
 - 3.4.3 Convolution of Distributions with Smooth Functions ... 178
 - 3.4.4 Convolution and Translation-Invariant Operators 182
 - 3.5 Support 185
 - 3.5.1 Definition and Basic Properties 185
 - 3.5.2 Compactly Supported Distributions 187
 - 3.5.3 Convolution of Distributions 188
 - 3.6 Differentiation 190
 - 3.6.1 Definition and Basic Properties 190

3.6.2	A Relation between Classical and Distributional Differentiation	192
3.6.3	Distributions and Derivatives of Continuous Functions	195
3.6.4	Distributions Supported at a Point	197
3.7	The Fourier Transform of Tempered Distributions	200
3.7.1	Definition of the Distributional Fourier Transform	200
3.7.2	Basic Properties of the Fourier Transform	202
3.7.3	The Paley–Wiener Theorem for Tempered Distributions	203
3.7.4	The Distributional Poisson Summation Formula	205
3.7.5	The Hilbert Transform	205
3.8	Sobolev Spaces	210
3.8.1	Definition and Basic Properties	210
3.8.2	Sobolev Spaces and Distributional Derivatives	212
3.8.3	Duality	213
3.8.4	The Sobolev Embedding Theorem	214
4	Measures	217

Part I Appendices

A	Metrics, Norms, Inner Products, and Topology	221
A.1	Notational Conventions	221
A.2	Metrics and Convergence	222
A.3	Norms and Seminorms	223
A.3.1	Infinite Series in Normed Spaces	224
A.3.2	Convexity	225
A.4	Examples of Banach Spaces: ℓ^p , C_b , C_0 , C_b^m	225
A.4.1	The ℓ^p Spaces	226
A.4.2	Some Spaces of Continuous and Differentiable Functions	227
A.5	Inner Products	230
A.6	Topology	233
A.6.1	Product Topologies	235
A.7	Convergence and Continuity in Topological Spaces	236
A.7.1	Convergence	236
A.7.2	Continuity	238
A.7.3	Equivalent Norms	240
A.8	Closed and Dense Sets	242
A.9	Compact Sets	243
A.10	Complete Sequences and a First Look at Schauder Bases	246
A.10.1	Span and Closed Span	247
A.10.2	Hamel Bases	249
A.10.3	Introduction to Schauder Bases	249
A.11	Unconditional Convergence	251
A.12	Orthogonality	253

A.12.1	Orthogonality and the Pythagorean Theorem	253
A.12.2	Orthogonal Direct Sums	253
A.12.3	Orthogonal Projections and Orthogonal Complements	254
A.13	Orthogonality and Complete Sequences	255
A.14	Urysohn's Lemma	257
B	Lebesgue Measure and Integral	259
B.1	Exterior Lebesgue Measure	259
B.2	Lebesgue Measure	261
B.2.1	Definition and Basic Properties	261
B.2.2	Equivalent Formulations of Measurability	262
B.2.3	Almost Everywhere	264
B.3	Measurable Functions	265
B.4	Convergence in Measure	266
B.5	The Lebesgue Integral	267
B.5.1	Integration of Nonnegative Simple Functions	267
B.5.2	Integration of Nonnegative Functions	268
B.5.3	Integration of Real-Valued and Complex-Valued Functions	271
B.5.4	The Lebesgue Dominated Convergence Theorem	271
B.5.5	Relation to the Riemann Integral	272
B.6	The L^p Spaces	273
B.6.1	Norm and Completeness	273
B.6.2	On Abuses of Notation	274
B.6.3	Convergence in $L^p(E)$	276
B.6.4	Local Integrability	277
B.7	Repeated Integration	279
B.8	Functions of Bounded Variation	281
B.8.1	Definition and Examples	282
B.8.2	The Jordan Decomposition	283
B.8.3	Differentiability of Functions of Bounded Variation	285
B.9	Absolutely Continuous and Singular Functions	286
B.9.1	Singular Functions on the Real Line	286
B.9.2	Absolutely Continuous Functions on the Real Line	288
B.9.3	Preparation for the Banach–Zarecki Theorem	291
B.9.4	The Banach–Zarecki Theorem and its Implications	294
B.10	Hölder Continuity	296
C	Functional Analysis and Operator Theory	299
C.1	Linear Operators on Normed Spaces	299
C.1.1	Equivalence of Boundedness and Continuity	301
C.1.2	Isomorphisms	302
C.1.3	Eigenvalues and Eigenvectors	303
C.2	Some Useful Operators	304
C.2.1	Orthogonal Projections	304

C.2.2	Multiplication Operators	305
C.2.3	Integral Operators	305
C.2.4	Convolution	309
C.3	The Space $\mathcal{B}(X, Y)$	310
C.4	Banach Algebras	310
C.5	Some Dual Spaces	312
C.5.1	The Dual of a Hilbert Space	312
C.5.2	The Dual of $L^p(E)$	314
C.5.3	The Relation between $L^{p'}(E)$ and $L^p(E)^*$	315
C.6	Adjoint for Operators on Hilbert Spaces	317
C.6.1	Adjoint of Bounded Operators	317
C.6.2	Adjoint of Unbounded Operators	318
C.6.3	Bounded Self-Adjoint Operators on Hilbert Spaces	319
C.6.4	Positive and Positive Definite Operators on Hilbert Spaces	321
C.7	Compact Operators on Hilbert Spaces.....	323
C.7.1	Definition and Basic Properties	323
C.7.2	Finite-Rank Operators	325
C.7.3	Integral Operators with Square-Integrable Kernels	327
C.8	The Spectral Theorem for Compact Self-Adjoint Operators ...	328
C.8.1	Existence of an Eigenvalue	328
C.8.2	The Spectral Theorem	329
C.9	Hilbert–Schmidt Operators	332
C.9.1	Definition and Basic Properties	332
C.9.2	Singular Numbers and Schatten Classes	333
C.9.3	Hilbert–Schmidt Integral Operators	336
C.9.4	Trace-Class Operators	338
C.10	The Hahn–Banach Theorem	339
C.10.1	Abstract Statement of the Hahn–Banach Theorem	339
C.10.2	Implications of the Hahn–Banach Theorem	340
C.10.3	Orthogonal Complements in Normed Spaces	342
C.10.4	X^{**} and Reflexivity	342
C.10.5	Adjoint of Operators on Banach Spaces	343
C.11	The Baire Category Theorem	344
C.12	The Uniform Boundedness Principle	346
C.13	The Open Mapping Theorem	347
C.14	The Closed Graph Theorem	348
C.15	Schauder Bases	349
C.15.1	Continuity of the Coefficient Functionals	349
C.15.2	Minimal Sequences	350
C.15.3	A Characterization of Schauder Bases	352
C.15.4	Unconditional Bases	352
C.16	Weak and Weak* Convergence	353

D Borel and Radon Measures on the Real Line 355

D.1 σ -Algebras 355

D.2 Signed Measures 357

 D.2.1 The Jordan Decomposition 359

D.3 Positive Measures and Integration 361

 D.3.1 Basic Properties of Positive Measures 361

 D.3.2 Borel Measurable Functions 362

 D.3.3 Integration of Nonnegative Functions 362

 D.3.4 Integration of Arbitrary Functions 364

D.4 Signed Measures and Integration 366

D.5 Complex Measures 368

D.6 Fubini and Tonelli for Borel Measures 372

D.7 Radon Measures 374

D.8 The Riesz Representation Theorem for Positive Linear
Functionals on $C_c(\mathbb{R})$ 375

 D.8.1 Topologies on $C_c(\mathbb{R})$ 376

 D.8.2 Positive Linear Functionals on $C_c(\mathbb{R})$ 378

D.9 The Relation Between Radon and Borel Measures on \mathbb{R} 379

D.10 The Dual of $C_0(\mathbb{R})$ 382

E Topological Vector Spaces 385

E.1 Motivation and Examples 385

E.2 Topological Vector Spaces 390

 E.2.1 Base for a Topology 390

 E.2.2 Topological Vector Spaces 390

E.3 Topologies Induced by Families of Seminorms 392

 E.3.1 Motivation 392

 E.3.2 The Topology Associated with a Family of Seminorms 392

 E.3.3 The Convergence Criterion 394

 E.3.4 Continuity of the Vector Space Operations 396

 E.3.5 Continuity Equals Boundedness 396

E.4 Topologies Induced by Countable Families of Seminorms 398

 E.4.1 Metrizing the Topology 398

 E.4.2 Tempered and Compactly Supported Distributions 400

E.5 $C_c^\infty(\mathbb{R})$ and its Dual Space $\mathcal{D}'(\mathbb{R})$ 402

 E.5.1 The Topology on $C_c^\infty(\mathbb{R})$ 402

 E.5.2 The Space of Distributions 404

E.6 The Weak and Weak* Topologies on a Normed Linear Space 405

 E.6.1 The Weak Topology 405

 E.6.2 The Weak* Topology 406

E.7 Alaoglu's Theorem 408

 E.7.1 Product Topologies 408

 E.7.2 Statement and Proof of Alaoglu's Theorem 409

 E.7.3 Implications for Separable Spaces 410

E.8 Notes and References 412
