Contents

Part I A Functional Analysis Primer

1	Functional Analysis	3
1.1	General Notation	3
1.2	Definition and Examples of Banach Spaces	5
1.3	Hölder's and Minkowski's Inequalities	10
1.4	Basic Properties of Banach Spaces	14
1.5	Hilbert Spaces	21
1.6	Orthogonal Sequences in Hilbert Spaces	27
1.7	Operators	36
1.8	Bounded Linear Functionals and the Dual Space	41
1.9	The Hahn–Banach Theorem and its Implications	46
1.10	Reflexivity	50
1.11	Adjoint of Operators on Banach Spaces	51
1.12	Adjoint of Operators on Hilbert Spaces	53
1.13	The Baire Category Theorem	58
1.14	The Uniform Boundedness Principle	59
1.15	The Open Mapping Theorem	61
1.16	Topological Isomorphisms	63
1.17	The Closed Graph Theorem	66
1.18	Compact and Hilbert–Schmidt Operators	67
1.19	Weak Convergence	74

Part II Bases in Banach Spaces

2	Unconditional Convergence of Series in Banach and Hilbert Spaces	81
2.1	Convergence, Absolute Convergence, and Unconditional Convergence	82

2.2	Convergence with respect to the Directed Set of Finite Subsets of \mathbf{N}	86
2.3	Equivalent Characterizations of Unconditional Convergence	88
2.4	Further Results on Unconditional Convergence	93
2.5	Unconditional Convergence of Series in Hilbert Spaces	98
2.6	The Dvoretzky–Rogers Theorem	106
3	Bases in Banach Spaces	113
3.1	Hamel Bases	113
3.2	Bases	115
3.3	Schauder Bases	118
3.4	Equivalent Bases	127
3.5	Schauder’s Basis for $C[0, 1]$	129
3.6	The Trigonometric System	131
3.7	Weak and Weak* Bases in Banach Spaces	134
4	Biorthogonality, Minimality, and More About Bases	139
4.1	The Connection between Minimality and Biorthogonality	139
4.2	Shades of Grey: Independence	142
4.3	A Characterization of Schauder Bases	146
4.4	A Characterization of Minimal Sequences and Schauder Bases	149
4.5	The Haar System in $L^p[0, 1]$	152
4.6	Duality for Bases	154
4.7	Perturbations of Bases	156
5	Unconditional Bases in Banach Spaces	161
5.1	Basic Properties and the Unconditional Basis Constant	161
5.2	Characterizations of Unconditional Bases	164
5.3	Conditionality of the Schauder System	168

Part III Bases and Frames in Hilbert Spaces

6	Bessel Sequences and Riesz Bases in Hilbert Spaces	173
6.1	Bessel Sequences in Hilbert Spaces	173
6.2	Bounded Unconditional Bases and Riesz Bases in Hilbert Spaces	179
7	Frames in Hilbert Spaces	187
7.1	Definition and Basic Properties	187
7.2	Frame Expansions and the Frame Operator	197
7.3	Overcompleteness	203
7.4	Frames and Bases	206
7.5	Characterizations of Frames	208
7.6	Convergence of Frame Series	213

7.7 Excess 217

8 Gabor Frames 225

8.1 Notation 226

8.2 Painless Nonorthogonal Expansions 229

8.3 The Nyquist Density and Necessary Conditions for Frame
Bounds 234

8.4 The Zak Transform 237

8.5 Gabor Systems at the Critical Density 244

8.6 The Balian–Low Theorem 247

8.7 The HRT Conjecture 252

9 Wavelet Bases 261

Part IV Fourier Series

10 Fourier Series 265

10.1 Notation and Terminology 265

10.2 Fourier Coefficients and Fourier Series 267

10.3 Convolution 270

10.4 Approximate Identities 274

10.5 Partial Sums and the Dirichlet Kernel 278

10.6 Cesàro Summability and the Fejér Kernel 282

10.7 The Inversion Formula for $L^1(\mathbf{T})$ 287

10.8 The Partial Sum Operators 289

10.9 The Conjugate Function 293

Part V Appendices

A Lebesgue Measure and Integration 301

A.1 Exterior Lebesgue Measure 301

A.2 Lebesgue Measure 302

A.3 Measurable Functions 304

A.4 The Lebesgue Integral 304

A.5 L^p Spaces and Convergence 307

A.6 Repeated Integration 308

A.7 The Fourier Transform on the Real Line 310

Hints for Exercises 313

Index of Symbols 327
