Spring 2004

Test 1 Distribution of Scores.

The Test 1 average in my 2 pm Math 1502 was 55, and the individual section averages were very close to this. The scores ranged from 3 to 100. 14 students (13%) scored 90 or higher, and 45 (43%) scored below 50. This latter percentage is much, much higher than I would like. Very few students have come to my office hours. I remain eager to help you, but you must take responsibility and seek help when you need it. Please see me, your TA, and if necessary follow the "tutorials" link on my Math 1502 web page. I will put some review exercises on the web later this week, and I strongly urge you to try them and to see me or your TA for assistance.
Test 1 Distribution of Scores.

The distribution of scores will be posted on Tuesday 10 February.
